

Sellafield Supply Contract

Sellafield Ltd, the company responsible for decommissioning, reprocessing and nuclear waste for the Nuclear Decommissioning Authority (NDA), has selected **ERIKS** as a main supplier of MRO mechanical spares, to include valves, pumps, bearings, seals, gaskets and power transmissions. The bidding process, a collaborative procurement exercise on behalf of the NDA and the various site licence companies, was carried out by Sellafield Ltd, and the 4 year contract sees ERIKS expanding into regions

where it is not currently well-known. However, ERIKS in-depth technical knowledge has secured a major deal that will not only service Sellafield but also support other NDA locations in the UK.

Grundfos Pump School

At **Grundfos** we place great importance on our relationship with our customer base and we strive to offer support in a variety of ways – including offering relevant and focussed training opportunities. In 2012 we are having a range of training opportunities focussed at various professionals who work within industry, commercial applications and water and wastewater areas. Courses are available at various locations around the country depending on content and the need for demo products. Training days are free of charge. So regardless of your experience level in the pump industry come and visit us at www.uk.grundfos.com and click on Industrial Pump School to find out more about the 15 courses that add up to a total of 44 training days currently available throughout 2012.

High-res Thermal Imaging Camera

A new high-resolution handheld thermal imaging camera, the IR32DS has been launched by **Irisys**. The feature-rich camera's 320 x 240 pixel resolution is normally found on far more expensive models, and is ideal for the engineer or thermographer who demands a crisp, detailed image and greater thermal measurement accuracy. The IR32DS offers four times the resolution of a standard 19,200 pixel array, providing excellent imaging performance especially for viewing smaller items and objects from a long distance. Typical applications include inspection of electricity power lines, distribution sub-stations, industrial plant and ceiling mounted industrial plant.

Pumps Provide the Environmental Solution

A **Hughes Pumps** pump set is being used by Greenway Environmental in high-pressure, water jetting cleaning applications, including heat exchanger cleaning and the internal cleaning of tanks containing harmful substances, such as aviation fuels, chemicals, oil-based products and agricultural products. At the heart of the powerful and versatile package is an 5 diesel engine driven pump - delivering 59 litres/min at 1000bar - mounted on a fully enclosed grit blasted and powder coated road trailer, supplied with accessories including hoses, gun, nozzle and a foot control valve.

New Touchscreen Interlock Management System

Dutch Interlock specialist **Netherlocks** launches its **Interlock System Information (ISI)** Touch Screen key management device. As a standalone unit or integrated into either a key cabinet or control panel, the ISI stores all relevant information about an interlock system in a centralised, user-friendly format without the need for specialised training. All keys are shown on screen and touching them will display detailed information about the key itself and the related system – system name, operating sequence logic, P&ID and location. Company-specific content can also be added if desired. Adding a printer and operating sequence instructions can be produced for use away from the console. The ISI device helps to reduce confusion, enhances productivity and improves plant safety.

Promotion, Projects & Plans

Monitran – a world-leader in the development and manufacture of transducers for the measurement of vibration, proximity and displacement – has promoted Andy Anthony to the position of Managing Director. Andy joined Monitran in 2006 as Operations Director, having previously worked in the papermaking. Andy comments: "I'm delighted with my promotion to MD and, having completed the revamping of the manufacturing processes, which I set out to do as Operations Director, I'm keen to move Monitran forward as a professional, customer-facing organisation. We're already the UK's leading OEM of vibration sensors, but we're certainly not resting on our laurels."

First Ultrasound Port

Arcing, tracking and corona are early signs of potential failure in electrical distribution systems and switchgear. An ultrasound gun can detect these, but only if the sound quality is good enough to provide a viable reading. Furthermore, the data collection must be repeatable and reproducible for any condition based monitoring programme to reveal a trend and grade severity. This can now be easily achieved – the **IRISS VP12** is the world's first ultrasound port that allows access to consistent quality data regardless of technician experience or enclosure rating.

It enables potentially hazardous and costly faults to be identified efficiently during routine inspections.

Pay as you Sense

Equipment rentals are helping companies overcome the hurdle of finding investment capital to fund development and verification projects. Companies are seeing their markets improve, but don't have the reserves to finance all the activities that will kickstart their sales. What money there is has to be used carefully, which usually means funding some projects but not others, resulting in lost opportunities.

Having survived more than one downturn, **Sensor Technology** has a rental option in place for its TorqSense range of torque sensors. Potential users can choose to rent the equipment, rather than buy it, thus circumventing raising capital purchase approval. If required, the company is happy to convert the rental to a sale, offsetting a percentage of the hire fee already paid.

Boost to Local Cattle Market

T-T pumps have supplied a multistage booster set to a cattle market to cater for its wash down requirements. The company specialises in the manufacture and installation of agricultural products and systems and supplied the stainless steel pump system to the Barbers Cattle Market in Shropshire. The washdown set (Hydroboost) features cost-effective intelligent variable speed drives which optimise system efficiency with a duty/assist configuration to compensate for the varied demand of the market. After reviewing the original systems' location within a 4 metre deep chamber, T-T designed the booster set to be surface mounted for ease of access, service and maintenance.
