

TorqSense Rotary Torque Sensors

Sensor Technology has launched the TorqSense RWT410/420 series, replacing the RWT310/320 series.

The RWT410/420 series features electronics

that have been upgraded to produce lower power consumption of 3 watts, frequency response up to 10kHz and resolution of .02 of FSD, with faster digital data throughput and increased transducer overload to 300%, these are significant performance gains. Other ranges of TorqSense transducers available include the RWT430/440 with separate electronics and the new RWT450/460 pulley torque sensors.
